

## How to Clean Your Grinder?

**In order to produce predictable high quality coffee and avoid any unnecessary maintenance, it is important that your grinder be regularly cleaned, internally and externally.**

### **Daily**

1. Doserless: after the last coffee, unplug the grinder from its power. Use grinder brush to remove the excess grinds that may have built up inside the chute and on externals. We recommend the following for that: [Grinder Minder Pallo](#)
2. Doser: unplug the power, and use the brush to clean the excess powder from the doser chambers, if access is easy.

### **Weekly**

1. Repeat Daily procedure
2. Remove the hopper (if possible) and empty the hopper from the beans left over. PLEASE ENSURE YOU UNPLUG THE GRINDER AND BLADES ARE NOT IN MOTION.
3. Clean the inside of the hopper with a [soft wet cloth](#).
4. Remove grind residue from top blades area with a brush (if accessible)  
Tip: use a portable vacuum cleaner to suck all the residue from the external and blades / doser chambers.

### **Every 3-6 Months**

1. Repeat daily and weekly procedure
2. Doser: unscrew the finger guard to allow an easy access to chute and clean with a brush
3. Insert 1 pack of Grindz tablets in your hopper and grind it like you're grinding normal coffee beans. You'll find Grindz [here](#).  
The tablet will absorb the coffee oils and residue on your blades and will clean the blades so you don't experience unwanted tastes. It's also optimizes the grinder's performance.  
After using the Grindz, add some coffee beans to your hopper and grind it through. This will clean the tablets residue and coat your blades again with coffee oils.
